

Product-Information

Impreg 290 S

Properties: For impregnating all types of concrete, anorganic plasters, asbestos cement, limesandstone, natural and cast stone, gas concrete, mineral paint coatings, lime paint coatings.

Impreg 290 S is a ready-made silicone building preserving agent used for subsequent water repellent finishing of building materials. Distributed onto the building material, the cleaner reacts with the base surface. It also condenses to form a non-adhesive polysiloxane when affected by humidity.

Impreg 290 S has important advantages as concerning its effectiveness and longlasting:

- very high penetration depth
- very high alkali-resistance
- non-adhesive drying
- application on moist, but still absorbing ground

Chem. characteristics: content of active substances 10%, solvent

Dosage: pure

Directions for use : apply Impreg 290 S generously and evenly to the building material in one or more working steps by flowing, spraying, painting or dipping. Generally two applications are recommended for the facade impregnation.

Impreg 290 S can be also used on building materials, which are still moist, for ex. recently decorticated elements of concrete. The penetration depth is of course higher when applying on air-dry surfaces.

Application: according to the absorbency of the ground between 0,5 and 1,5 L /m²

Note: Do not use indoors. Keep closed the container. Do not store the product at a temperature above +30°C. Please follow carefully the instructions and safety recommendations out of the EU-safety regulation form.

Specifications :
Expiration : minimum of 2 years
pH-value : none
Contents : methylethoxypolysiloxane in mineral varnish

Container size : 20 L / container

Un-number : 1223
Un-number : 12670021
Item-number : 10300
